Subjects (MeSH): Emergency Medical Services - methods
Emergency Medicine - methods

Abstract: This brand new title in the ABC series provides a comprehensive overview of pre-hospital medicine, including transport, patient assessment, emergency care systems, and pre-hospital interventions. With pre-hospital care being the start of the "trauma chain", the treatment patients receive on-scene as well as en-route can be life-saving, and this new title is invaluable for all staff involved in emergency and pre-hospital medicine.

Contents: 1. Activation & Deployment of Pre-hospital Services – 2. Scene safety and assessment – 3. Motor Vehicle Collision Extrication – 4. Personal Protective Equipment – 5. Monitoring in Prehospital Care – 6. The Role of Pre-hospital Ultrasound – 7. The Primary Survey – 8. Airway Assessment & Management – 9. Breathing Assessment & Management – 10. Circulation management – 11. Analgesia And Procedural Sedation – 12. Emergency Anaesthesia – 13. Cardiac Arrest and End of Life Decisions – 14. Head Injury – 15. Spinal Injuries – 16. Abdominal Trauma – 17. Pelvic Trauma – 18. Extremity Trauma – 19. Management of burns – 20. Crush Syndrome & Suspension Trauma – 21. Ballistic & Blast Trauma – 22. Medical Emergencies – 23. Environmental Injuries – 24. Environmental Emergencies - High Altitude Illness – 25. Drowning, Near Drowning and Immersion Syndrome – 26. Diving incidents – 27. Pregnancy and Childbirth – 28. Prehospital Management Of The Paediatric Patient Fiona – 29. The Elderly Patient – 30. Prehospital Management of the Bariatric Patient – 31. Retrieval and Transport – 32. Mass Gatherings – 33. Mass Casualty – 34. Chemical, Biological, Radiation and Nuclear (CBRN) Incidents – 35. Clinical Governance – 36. Medicolegal & ethical – 37. Research and Future Development – Index.

Group Processes
Practice Management, Medical - organization & administration

Subjects (LCSH): Family medicine
Emergency medicine

Abstract: Properly run group visit programs offer patient-centered care that can improve access, quality, outcomes, productivity, revenues, and both patient and physician satisfaction. The ABCs of Group Visits is a concise implementation manual that guides readers through a 10-week pipeline to design and launch a successful customized group visit program in any practice, large or small.

The group visit model is highly adaptable and has been used to great success for follow-up visits, physical examinations, new patient intakes, and chronic disease management (among other applications) and can offer hope to beleaguered primary and specialty care physicians, Medicare, and Medicaid.

Ideal for physicians, healthcare administrators and executive leaders alike, The ABCs of Group Visits contains all the vital information to help solve many of the problems facing busy, backlogged physicians and bring joy back into the practice of medicine. "Group visits are just the type of 'win-win' innovation that healthcare needs today'improving outcomes, enhancing service, and at their best, reducing costs and burden on both clinicians and those they serve."á Don Berwick, MD, former President and CEO of IHI "Group visits offer an innovation to healthcare that can drive improvements to quality, outcomes, service, and productivity in all spheres in medicine'plus, as demonstrated in our substantial experience with them at Cleveland Clinic, yield high levels of patient and physician satisfaction in a wide variety of specialties." David L. Bronson, MD, FACP, President and CEO, Cleveland Clinic Regional Hospitals; Professor of Medicine, Cleveland Clinic Lerner College of Medicine.

Contents: Why try group visits in your practice? – Today's three major group visit models – Twelve key first steps – Weeks 10 and 9 prior to launching your group visit – Weeks 8, 7, and 6 prior to launch – Weeks 5, 4, and 3 prior to launch – Weeks 2 and 1 prior to launch – The launch of your new group visit and thereafter – Index.

Language: English

Physical Description: 1 electronic document ([2] p.) : digital, PDF file

Subjects (LCSH): Abdominal pain

Specialty: Emergency

Abstract: The abdomen is the area from the bottom of your rib cage to your pelvic (hip) bones. Abdominal pain can be caused by many things, including: indigestion, constipation (not being able to poop), gas, infection (either bacterial or viral), food poisoning, ulcers, appendicitis, gallbladder or liver disease, kidney stones, bladder infections, menstrual pain, and muscle spasms (muscle movements you cannot control). Most abdominal pain goes away without treatment. This pamphlet gives instructions for when your exam and test results suggest there is nothing seriously wrong or life-threatening. Follow-up instructions and symptoms that need immediate medical attention are given.

Abstract: Since it was first published, Accident and Emergency Radiology: A Survival Guide has become the classic in-my-pocket-reference and an indispensable aid to all those who work in the Emergency Department. The core and substantial value lies in the step-by-step analytical approaches which help you to answer this question: "These images look normal to me, but . . . how can I be sure that I am not missing a subtle but important abnormality?"

Ensure accuracy in reading and interpretation of any given image. Common sources of error and diagnostic difficulty are highlighted. Prevent mistakes. Pitfalls and associated abnormalities are emphasized throughout. Avoid misdiagnoses. Normal anatomy is outlined alongside schemes for detecting variants of the norm. Each chapter concludes with a summary of key points. Will provide a useful overview of the most important features in diagnosis and interpretation. Easily grasp difficult anatomical concepts. Radiographs accompanied by clear, explanatory line-drawings.

Contents: Key principles – Particular paediatric points – Paediatric skull-suspected NAI – Adult skull – Face – Shoulder – Paediatric elbow – Adult elbow – Wrist & distal forearm – Hand & fingers – Cervical spine – Thoracic & lumbar spine – Pelvis – Hip & proximal femur – Knee – Ankle & hindfoot – Midfoot & forefoot – Chest – Abdominal pain & abdominal trauma – Penetrating foreign bodies – Swallowed foreign bodies – Test yourself – Test Yourself-answers.

Specialty: Critical Care
Emergency Medicine
Neurology

Abstract: The book provides detailed information on all major neuroemergencies, and includes a detailed checklist for practical care during the first hour of an emergency. Reinforcing the concept of quality care for better outcomes in patients with neurological diseases, the book discusses approaches to comatose patients, neurological evaluation, neuropharmacology, neuroradiology, traumatic brain and spine injury, and various other neurological disorders. The field of neuroanesthesiology and neurocritical care has expanded with the advent of newer, complex surgeries, and neurocritical care is becoming an established subspecialty of neuroscience. Neurological emergencies require special care since prevention of secondary damage to the brain is of paramount importance. A valuable resource for intensivists, neurointensivists, emergency medicine physicians, neurology and neurosurgeons and nursing professionals involved in neurocare, this book also serves as study material for participants of the two-day course on "Acute Neuro Care" designed by the Indian Society of Neuroanesthesiology and Critical Care (ISNACC).

Contents: Airway and Breathing – Approach to a Patient with Coma – Focused Neurological Evaluation – Neuropharmacology – Role of Ultrasound in Neurological Emergencies – Basics of Neuroradiology – Raised ICP and Brain Herniation – Traumatic Brain Injury – Traumatic Spine Injury – Acute hemorrhagic stroke – Aneurysmal Subarachnoid Hemorrhage – Acute Ischemic Stroke – Management of Status Epilepticus – Acute Non-traumatic Weakness – Meningitis and Encephalitis.

Abstract: Using a body systems approach, and fully updated in light of new NEWS2 and NMC future nurse standards, as well as acknowledging the challenges faced by people with delirium in acute care settings, the second edition of this book provides a comprehensive overview of the essential issues in this important subject.

Topics covered include recognition and identification of physiological and mental deterioration in adults; identification of disordered physiology that may lead to a medical emergency linked to deterioration of normal function; relevant anatomy and physiology; pathophysiological changes and actions that need to be taken; immediate recognition and response; investigations, diagnosis and management issues; and teaching and preventative strategies.

Abstract:	This book provides recommendations for evaluation and therapy in the area of acute pediatric neurology; these are presented didactically with frequent use of illustrations and algorithms. Chapters in the first part of the book discuss presenting symptoms of acute neurological conditions. The second part of the book covers major areas of acute pediatric neurology and each of these chapters has three key elements: description of presenting symptoms; recommended assessments; and recommended interventions.
Contents:	Part I. Acute Neurological Symptoms – Unconsciousness, Coma, and Death by Neurological Criteria – Seizures – Acute Headache – Acute Disturbance of Motor Function – Acute Disturbance of Vision – Dizziness and Vertigo – Acute Changes of Behavior and Memory – Part II. Management of Acute Neurological Conditions – Ischemic and Hypoxic Insults: Near Drowning, Asphyxia, Carbon Monoxide Poisoning – Neurometabolic Crisis – Approach to Childhood-Onset Muscle Cramps, Exercise Intolerance and Recurrent Myoglobinuria – Management of Seizures and Status Epilepticus – Management of Increased Intracranial Pressure – Management of Migraine and Other Headaches – Central Nervous System Infections (Bacteria and Parasites) – Management of Acute Neuromuscular Disorders – Stroke and Cerebrovascular Diseases – Viral Infections, Autoimmune and Demyelinating Conditions of the Central Nervous System – Spasticity, Dystonia, and Other Movement Disorders: A Comprehensive Treatment Guide – Acute Pain.

 Psychiatry

Abstract: ADHD in Adults: A Practical Guide to Evaluation and Management is the product of a unique collaboration of international specialists. This volume offers easy-to-read guidance, and includes checklists, rating scales and treatment planning tools. It was designed for a broad audience of caregivers working in diverse settings, including psychiatrists, social workers, primary care physicians, nurse specialists and psychologists.

The authors are highly acclaimed clinicians, investigators and educators. They offer step-by-step guidance for implementation of best practices, drawing from clinical research and their experience treating thousands of patients. They cover diagnosis, treatment planning, and state-of-the-art application of pharmacology, psychotherapy, skill-building, family system and environmental interventions for both simple and complex cases. The scales and worksheets in this Guide were developed to efficiently facilitate assessment and management.

The Editor is an international leader in the field from the Clinical and Research Program in Adult ADHD at Massachusetts General Hospital (MGH) and Harvard Medical School, which has made pioneering and highly cited contributions to the understanding of ADHD.

This Guide is a definitive, indispensable resource for all health providers who wish to optimize their approach to adult patients with ADHD.

Contents: ADHD in adults: a clinical concern – Clinical Assessment of ADHD in Adults – Treatment Planning for Adults with ADHD – Neuropsychological Assessment of ADHD and Executive Function Deficits in Adults – Stimulant Pharmacotherapy for Adults with ADHD – Non-Stimulant Drug Treatments for Adults with ADHD – Psychosocial Treatment for Adult ADHD – Managing ADHD in Adults with Common Comorbidities – Managing ADHD in Adolescence and Young Adulthood: Emerging comorbidities, and tailored treatment – ADHD in Families – Clinical Dilemmas in the Assessment and Management of ADHD in Adults: A Psychiatrist’s View from an Urban Hospital Clinic.

Transportation of Patients

Specialty: Emergency Medicine

Abstract: Now in its fully revised and expanded second edition, this volume is the definitive resource on long-distance air transport of injured patients in both peacetime and wartime. It discusses the history of aeromedical evacuation, triage and staging of the injured patient, evacuation from site of injury to medical facility, air-frame capabilities, medical capabilities in-flight, response to in-flight emergencies, and mass emergency evacuation. Specific medical conditions are addressed in detail in the second half of the book, including general surgical casualties such as abdominal wounds and soft tissue injuries, vascular injuries, maxillofacial injuries, head and spinal cord injuries, ophthalmologic casualties, orthopedic casualties, burns, pediatric casualties, obstetric-gynecologic casualties, and more. For each medical condition, important topics are addressed such as conditions needed to be met before transportation, special concerns, supplies and needs of the specific patients and possible in-flight emergencies and their appropriated treatment. Containing several new chapters and featuring extensively updated contributions from experts in the field, *Aeromedical Evacuation: Management of the Acute and Stabilized Patient, Second Edition* is a must-have reference for a whole new generation of military flight surgeons and flight nurses responsible for aeromedical evacuation of casualties as well as civilian physicians and nurses involved in air transport of ill and post-operative patients.

Contents: Part I. The Need – Introduction – Aeromedical Evacuation: A Historical Perspective – Military Casualty Evacuation: MEDEVAC – Civilian Air Medical Transport – Part II. The Means – Aircraft Considerations for Aeromedical Evacuation – Preparation for Long-Distance Aeromedical Evacuation – Aeromedical Patient Staging – Military Aeromedical Evacuation Nursing – Critical-Care Air Transport: Patient Flight Physiology and Organizational Considerations – Part III. The Patients – Aeromedical Evacuation of Patients with Abdominal, Genitourinary, and Soft Tissue Injuries – Orthopedic Patients – Aeromedical Evacuation of the Neurosurgical Patient – Otorhinolaryngology Head and Neck Surgery Patients – Care of Ophthalmic Casualties – Peripheral Vascular Casualties – Aeromedical Evacuation of Cardiothoracic Casualties – Burn Casualties – Patients Requiring Mechanical Ventilation – Medical Casualties – Aeromedical Evacuation of Patients with Contagious Infections – Aeromedical Evacuation of Obstetric and Gynecological Patients – Overview of Pediatric and Neonatal Transport – Aeromedical Evacuation of Psychiatric Casualties.

Emergency medicine

Abstract:

Alcohol, Nutrition, and Health Consequences provides practical, data-driven resources to help the reader understand the basics, treatments and preventive strategies that are involved in the understanding of how alcohol may affect healthy individuals as well as those with chronic alcohol use with or without relevant infectious diseases, obesity, diabetes and/or neurocognitive declines. It will also help the clinician define the causes and types of nutritional changes due to alcohol use and also explain how nutrition can be used to ameliorate its consequences. Chapters present the application of current nutritional knowledge by physicians and dietitians. Specific areas involving alcohol-related damage due to nutritional changes are reviewed, including heart disease, obesity, digestive tract cancers, lactation, brain function, and liver disease. In addition, alcohol's effects on absorption of minerals and nutrients, a key role in causing damage are treated. The importance of diet in modifying alcohol and its metabolite damage is also explained. Alcohol, Nutrition, and Health Consequences is essential reading for alcohol therapists and researchers as well as primary care physicians and dietitians and is an easy reference to help the clinician, student, and dietitian comprehend the complex changes caused by direct and indirect effects of ethanol at the cellular level via its nutritional modification.

Contents: Alcoholic and Nutrition: an Overview – Genetics of alcohol metabolism -
- Laboratory models available to study alcohol and nutrition – Ethanol-
induced lipid peroxidation and apoptosis in embryopathy – Alcohol Use
During Lactation: Effects on the Mother Infant Dyad – Moderate alcohol
administration: oxidative stress and nutritional status – Alcohol use
and abuse: Effects on Body Weight and body composition – Alcohol
Nutrition and health inequalities – The effect of diet on protein
modification by ethanol metabolites – Vitamin B12 deficiency in
alcoholics – Alcohol American Indians/Alaskan Natives and Alcohol:
Biology, Nutrition and Positive Programs – Metabolism of Ethanol to
Acetaldehyde in the Rat Mammary Tissue. Inhibitory Effects of Plant
Polyphenols and Folic Acid – Dietary zinc supplementation and
prenatal ethanol exposure – Tocotrienol and cognitive dysfunction
induced by alcohol – Soy Products Affecting Alcohol Absorption and
Metabolism – Oats supplementation and alcohol-induced oxidative
tissue damage – Fish oil n-3 fatty acids to prevent hippocampus and
cognitive dysfunction in experimental alcoholism – Alcohol in HIV and
possible interactions with antiretroviral medications – Popular energy
drinks and alcohol – The psychological synergistic effects of alcohol
and caffeine – Alcohol and Smoking: A correlation of use in youth? –
Are there Physiological Correlations between alcohol and tobacco use
in adults? – Alcohol, HIV/AIDS and Liver Disease – Nutritional status,
socioeconomic factors, alcohol and cataracts – Alcohol Intake and
High Blood Pressure – Alcohol and dyslipidemia – Dietary antioxidants
in chronic alcoholic pancreatitis – Alcohol consumption, lifestyle
factors and risk of type 2 diabetes – Alcohol, overweight, and obesity –
Nutrition alcohol and anorectic and bulimic adolescents – Viral
infections and cancer during alcohol use – Ethanol and
hepatocarcinogenesis – Alcohol, diet and their interaction in colorectal
and urinary tract tumors – Alcohol, acetaldehyde and digestive tract
cancer – Alcohol Intake and Esophageal Cancer: Epidemiologic
Evidence – A Nutritional approach to prevent alcoholic liver disease –
Nutraceutical potential of indigenous plant foods and herbs for
treatment of alcohol related Liver damage – Alcohol and nutrition as
risk factors for chronic liver disease – Alcohol-related liver disease:
Roles of insulin resistance, lipotoxic ceramide accumulation and
endoplasmic reticulum stress – Nutrition and alcoholic and non-
alcoholic fatty liver disease: The significance of cholesterol – Dietary
fatty acids and alcoholic liver disease – Nutrition in alcoholic
steatohepatitis – Alcoholic and non-alcoholic fatty liver disease and
vitamin A.

Subjects (MeSH): Ambulances - organization & administration
Emergency Medical Services - organization & administration
Emergency Service, Hospital - organization & administration
Abstract: This volume provides fresh insights and management understanding of the changing role of the ambulance services against the backdrop of massive cuts in health budgets around the world and the changing context of pre-hospital care within the wider healthcare networks. The challenges of funding, training and cultural transformation are now felt globally. The book offers critical insights into the theory and practice of strategic and operational management of ambulance services and the leadership needs for the service. One of the highlight of this volume is to bring together scholarship using experts—academics, practitioners and professionals in the field, to each of the chosen topics. The chapters are based in the practical experiences of the authors and are written in a way that is accessible and suitable for a range of audiences. We are confident that this book will cater to a wider audience to inform policy and practice, both in the UK and internationally. Paresh Wankhade is Professor of Leadership and Management at Edge Hill University, UK Kevin Mackway-Jones is the Medical Director at North West Ambulance Service NHS Trust, UK. This unique and valuable publication, charts the history and development of the ambulance service in England over the last hundred years or so. The role of this key emergency service has always been important, and arguably never more so than today. The contributing authors have not only provided the reader with great insights into where the service has come from and the leadership challenges it has, and continues to face; it also gives examples of how the future could look as our journey of transformation continues. Peter Bradley CBE, MBA (and author of Taking Healthcare to the Patient 2005), Chief Executive Officer. St John National Headquarters, New Zealand "With a year on year increase in demand for emergency ambulances and over 9 million calls annually, the UK Ambulance Service must change from its emergency care and transport focus model. Whilst there is some historical and cultural resistance to change there is a need for further development in clinical skills and a new perspective for the future Ambulance Service. This book brings together practitioners, managers, academics and provides a broad understanding of the major management issues in the UK Ambulance Service. It includes the history of the Ambulance Service, quality and risk management issues, commissioning, leadership, intra-operability and shape of the future ambulance service. The content will be of interest to students, practitioners and academics". Sir Keith Porter, Professor of Clinical Traumatology, University Hospitals Birmingham NHS Foundation Trust, United Kingdom.
