Corporate Author: Nova Scotia Health Authority. QEII. Eye Care Centre
Alternate Title: Eye removal
Place of Publication: Halifax, NS
Publisher: Nova Scotia Health Authority
Date of Publication: 2021
Format: Pamphlet
Language: French
Physical Description: 1 electronic document (10 p.) : digital, PDF file
Subjects (MeSH): Eye Enucleation
Eye Evisceration
Subjects (LCSH): Eye-Enucleation
Specialty: Ophthalmology
Abstract:

Vous et votre médecin avez parlé des raisons pour lesquelles il est nécessaire d'enlever votre œil ou le contenu du globe oculaire. Ce dépliant explique comment prendre soin de vous en toute sécurité. L'énucléation est le terme médical qui désigne le retrait ou l'ablation de l'œil. Le terme médical utilisé pour parler du retrait du contenu du globe oculaire en conservant la couche externe (coque sclérale ou sclère) est éviscération. Les deux interventions entraînent la perte permanente de l'œil. Ce dépliant explique ce qui se passe avant et après la chirurgie, le port d'une chemise d'hôpital, les médicaments, les soins à la maison ainsi que vos émotions. Vous y trouverez de plus des informations sur les prothèses oculaires (œil artificiel) ainsi qu'une liste des symptômes nécessitant une consultation médicale immédiate.

This pamphlet is a French translation of "Eye Removal" pamphlet 0582. Your health care provider has talked with you about why your eye or the contents of your eye must be removed. This pamphlet will help you learn how to safely care for yourself after your procedure. The medical term for eye removal is enucleation. The medical term for removing the contents of the eye and leaving the outer coat (sclera) behind is evisceration. Both procedures mean permanent loss of the eye. This pamphlet explains what will happen before and after your surgery, including wearing a dressing, medication, care at home, and emotions you may have. Information about having a prosthesis (artificial eye) is given. A list of symptoms that require immediate medical attention is provided.

Subjects (MeSH): Anophthalmos
Eye Enucleation
Eye, Artificial
Orbit Evisceration
Orbital Implants
Surgery, Plastic - methods

Specialty: Ophthalmology

Abstract: This book provides a comprehensive review on the surgical care of patients requiring removal of an eye, as well as consequent functional and cosmetic rehabilitation. In addition to covering the crafting of ocular prosthetics, *Anophthalmia: The Expert's Guide to Medical and Surgical Management* also addresses the psychological and physical adjustments to losing an eye, and adapting to that loss. Divided into five parts, *Anophthalmia* functions as a go-to reference for ophthalmologists and oculoplastic surgeons. The book begins by laying out the clinical foundations and history of anophthalmia. Part II and III discuss surgical removal techniques, prosthesis fitting and maintenance, congenital anophthalmia, infections and inflammations, and newer surgical techniques such as osseointegration after orbital exenteration. Finally, the book concludes with chapters on prosthetic options including scleral shells, keratopigmentation procedures, and cosmetic contact lenses. Unique in content, *Anophthalmia* is a vital resource for practicing ophthalmologists, oculoplastic surgeons, and all medical professionals who care for patients with surgical and traumatic loss of the eye and orbital tissues. Additionally, sufficient detail and explanation make this work accessible to those in training, such as medical students, ophthalmology residents, and fellows.

Contents:	Part I. Clinical Foundations – 1. Introduction & Historical Perspectives – 2. Clinical Decision Making – 3. Sympathetic Ophthalmia – 4. Psychological and Cognitive Adjustment to Visual Loss – 5. History of Ocular Implants – Part II. Surgical Techniques – 6. Enucleation and Techniques of Orbital Implant Placement – 7. Evisceration – 8. Exenteration and Multidisciplinary Approaches – 9. Orbital Implants and Wrapping Materials – 10. Osseous Integration After Exenteration – Part III. The Anophthalmic Socket – 11. Maintenance of the Anophthalmic Socket – 12. Anophthalmic Socket Syndrome – 13. Socket Inflammation & Infection – 14. Management of Implant Exposure & Extrusion – 15. Secondary Orbital Implant Techniques – 16. Management of the Contracted Socket – 17. Socket Malignancy – 18. Cosmetic Interventions in Anophthalmia – Part IV. Pediatrics & Oncology – 19. Congenital Anophthalmos (CA) – 20. Retinoblastoma and Uveal Melanoma – 21. Strategies for Orbital Expansion – Part V. Prosthetics – 22. Scleral Shells – 23. Keratopigmentation (Corneal Tattoo) and Prosthetic Contact Lenses – 24. Making an Ocular Prosthesis.
