**Available Online:** View Pamphlet

**Corporate Author:** Nova Scotia Health Authority. QEII. Diagnostic Imaging  
Nova Scotia Health Authority. QEII. Department of Nephrology

**Place of Publication:** Halifax, NS

**Publisher:** Nova Scotia Health Authority

**Date of Publication:** 2021

**Format:** Pamphlet

**Language:** English

**Physical Description:** 1 electronic document (5 p.) : digital, PDF file

**Subjects (MeSH):** X-Rays  
Fistula

**Subjects (LCSH):** X-rays  
Fistula

**Specialty:** Diagnostic Imaging  
Nephrology

**Abstract:** A fistulogram is a special X-ray. A colourless contrast (X-ray dye) will be injected into your blood vessels using an IV (intravenous line). This dye will help your health care team see your dialysis access (fistula). The test will take about 15 to 30 minutes. The pamphlet describes getting ready for the X-ray, how the test is done, and care after. Risks and a list of symptoms that require immediate medical attention are given.

**Responsibility:** Prepared by: Diagnostic Imaging Department and the Department of Nephrology

**Pamphlet Number:** 0229

Corporate Author: Nova Scotia Health Authority. General Radiography Modality Advisory Provincial Committee

Place of Publication: Halifax, NS

Publisher: Nova Scotia Health Authority

Date of Publication: 2022

Format: Pamphlet

Language: English

Physical Description: 1 electronic document ([6] p.) : digital, PDF file

Subjects (MeSH): X-Rays

Subjects (LCSH): X-rays

Specialty: Diagnostic Imaging

Abstract: X-rays are the most common type of diagnostic imaging test. They can be used to identify a fractured bone, a chest infection, something blocking the bowel, and more. Topics include: who will do the X-ray, how long it will take, what happens during, and what to do if you are pregnant. A list of additional resources is provided.
